

ZNE for Local Governments

2017 WORKSHOPS BROUGHT TO YOU BY THE CALIFORNIA PUBLIC UTILITIES COMMISSION

Join a no-cost workshop to learn how to prepare for California's ambitious goals for zero net energy (ZNE)* buildings.

California State Lottery District Office | Santa Fe Springs Credit: LPAS Architecture + Design

Local governments in California are leading the nation with sustainability and energy policies driving ZNE requirements. Learn about the work of these innovative cities, connect and share information with peers, hear what it takes to achieve low-energy buildings, and gain tools to help advance your ZNE policies, programs and projects locally.

Who should attend: Local and state government staff including planning, facilities, and building staff, as well as architects, engineers, contractors, consultants, and others interested in ZNE are encouraged to attend. Space is limited, so please register and reserve your spot today at newbuildings.org/municipal-workshops/.

About the Workshop

This four-hour workshop is designed to give local government staff the information, tools, and confidence to create and drive progress toward zero net energy goals. Case studies show how cities can be leaders within their own public building portfolios by creating a clear code and policy roadmap, and by transforming the market through public awareness. We will review how to achieve climate goals through ZNE pilot projects, deep energy retrofits starting with municipal building benchmarking and portfolio analysis, ZNE codes, financial incentives, ZNE recognition, and other tactics. In addition to sharing examples of successful plans and ZNE-ready policies, small working groups will develop their own ideas utilizing training materials.

*A zero net energy (ZNE) building generates as much energy as it consumes annually through clean, renewable sources.

December 11, 2017

12:30-4:30 pm
