

ZNE for Existing Buildings

2017 WORKSHOPS BROUGHT TO YOU BY THE CALIFORNIA PUBLIC UTILITIES COMMISSION

Join a no-cost workshop to learn how to achieve zero net energy (ZNE)* performance through whole building retrofits.

California has set ambitious goals for buildings to achieve ZNE by 2020 and 2030. Learn about the work of these innovative projects, connect and share information with peers, hear about successful ZNE projects, and gain tools to help advance your ZNE policies, programs, and projects.

Who should attend: Local and state government staff including planning, facilities, and building staff, as well as architects, engineers, contractors, private sector owners, commercial real estate professionals, consultants, and others interested in ZNE are encouraged to attend. Space is limited, so please register and reserve your spot today at newbuildings.org/existing-building-workshops/.

About the Workshop

The four-hour workshop will outline best practice steps and approaches to comprehensively enhance the energy performance of existing buildings to ZNE. The workshop will investigate retrofit opportunities in individual buildings as well as how advanced benchmarking can help prioritize opportunities across a portfolio. We will review technologies, approaches, processes as well as portfolio project prioritization methods. Case studies of building strategies and technologies will be presented including advanced strategies a design team can take to achieve ZNE on an existing building. The training will address operation and maintenance considerations, including energy monitoring for ongoing building performance.

*A zero net energy (ZNE) building generates as much energy as it consumes annually through clean, renewable sources.

**August 23 | 1:00-5:00 pm
Commerce, CA**

Net Zero Plus Electrical Training Institute | 6023 S. Garfield Avenue

In partnership with the Net Zero 2017 Energy + Water + Waste Conference

Brought to you by:
